COMPANY PROFILE

Introduction

Cosimex was formed in the spring of 1975 in Taipei, Taiwan. Now Cosimex Group has expanded numerous offices across the globe including manufacturing plants. Over the years, Cosimex Group had improved and developed various expertise to better serve our clients. Our services include Original Equipments Manufacturing (OEM), Original Design Manufacturing (ODM), Sourcing and Buying, and Pan-Asia Domestic Distribution.

Offshore Manufacturing

Cosimex is structured to provide offshore manufacturing facilities and manufacturing related services such as: molds and dies design, products development, and quality assurance and control. Our plants are located in Shenzhen and Jiaxing, China. The plants are run by well-experienced oversea hired executives, whom work closely with the sales and marketing offices around the world. Additionally, there are fully operational quality assurance offices in Shenzhen, Guangzhou, Shanghai, and Jiaxing to monitor production activities.

Cosimex Group's plants are eligible to take on projects that require extreme confidentiality because the plants are 100% owned. On the other hand, Cosimex also has over 200 qualified manufacturing partnerships throughout the regions to provide our clients with maximum production capacity and choices. Our manufacturing partners are spread in such countries as China, India, Malaysia, Taiwan, Vietnam and Thailand.

With the frequent currency fluctuations and rapid changing conditions of labor cost structure among various Asia markets, we are able to move from one country to another to accommodate our clients' needs. By widening it's market coverage, Cosimex offers competitive pricing and quality from the most appropriate country in the Far East region. We have achieved many contracts while offering an average 30% saving to our clients.

Plant Operation

Our plants utilize high precision technology to solve production problems and to ensure timely and efficient production. Moreover, the strict on-line quality assurance and quality control programs are in place to assure the components always perform to meet our clients' expectations.

We also have established in-house engineering and laboratory departments dedicated to production of precision components by utilizing the following technologies : · CNC Milling · Mass Drilling · Mass Assembling · Folding · Injection Molding · Powder Coating · Stamping Current products produced by our team are extensively used in a great variety of industries, namely: · Office and School Stationer · Kitchen Utensils & Cutlery · Storage Equipment · Valve & Hose Fittings · Electric Cables & Connectors · Screw Machinery Products · Special Components for Defense Industries · Vehicle Parts & Accessories · Electronic Products / System · Hardware and Home Tools · Corporate Gifts and Premium Products We have carefully chosen a group of manufacturing partners base upon their expertise and machinery in each perspective industry. Cosimex has completed extensive evaluation and development to validate our partners. We guarantee the best of the best to complete your demand.

Inspection Procedures

Our inspection can basically be classified into two levels of A and B: Level-A refers to products with extremely high precision requirement or new production run of any OEM parts; Level-B refers to products with slightly less precision requirement of parts or repeat production run of any OEM parts. Standard inspection stages are as follows:

1) Tooling Inspection: When tooling is completed our inspector must perform detailed checking on all dimensions against approved drawings;

2) Sample Approval: We will always provide our customers the first shot sample from the inspected tools for official approval. Once granted approval then the factory will be authorized to start production;

3) Laboratory Test and Inspection of Materials: Once materials are delivered to factory our inspectors must perform visual inspection and if required sample materials will be sent to the laboratory for technical analysis and testing;

4) INTERIM and On-line Inspection:
   · Level A: 100% on-line inspection will be required. Quality Control (QC) engineers must perform at least three times detailed inspection at A.Q.L. level specified by our principal. Inspectors shall perform at least two times at 30% on number of cartons and each carton at 10% minimum;
   · Level B: QC engineers must perform at least one time detailed inspection at A.Q.L. level specified by our principal. Inspectors shall perform at least two times at 10% on number of cartons and each carton at 5% of quantity;

5) Final Inspection:
   · Level A: QC engineers together with inspectors must perform inspection jointly, no goods shall be dispatched without properly signed technical inspection reports; and
   · Level B: Signed technical inspection reports by engineers are required on releasing goods for shipment.

Remarks:
· All problems, specifications or special instances that arise must be recorded in an inspection report and filed to the specification file immediately;
· On inspection of Level A projects, inspectors must carry the spec-file along and standard sample if necessary. On inspection of Level B items, inspectors should carry the product file or sample whichever is available;
· Upon completion of inspection, inspectors must bring back shipment sample to be dated and marked with invoice number;
· When issuing drawings for orders placed with factory, such drawings must be checked, recorded and signed by QC supervisor before releasing to the factory; and
· When it becomes not feasible to inspect before delivery, the respective QC supervisor must be notified and authorization must be obtained from the manager.

Buying from China & South Pacific Rim Countries

Cosimex' satellite offices in China serve as an effective sourcing and buying network for the group. As a buying service provider, Cosimex is to help our clients locate enquiries for products and coordinate buying trips into China or the most appropriate country. Cosimex will follow through with factories on issues and pending matters such as sampling, price improvement, design packing, and function approval prior to official release of order for clients. While representing our clients' best interests, we will ensure that factories comply with their specifications and tolerances as agreed upon. We can also perform on-line inspection, lifetime, and drop tests when required. Additionally, we will perform final inspections before releasing shipments to ensure our clients' satisfactions. Moreover, Cosimex will also coordinate clients' buying trip by arranging all transportation, hotels and meetings with all potential suppliers.

Pan-Asian Domestic Distribution

Cosimex' Domestic Sales department was established to focus in on local Hong Kong and China markets. The services we provide to our clients are the following:

· Feasibility market study for selling of either daily consumer products or high tech equipment system into China;
· Organize trade show and advertising campaign when require;
· With our in-house full time salespeople to push and promote your equipment or product to proper local clientele, companies and institutions; and
· To arrange warehousing, custom clearance, inland distribution and after sales service if necessary.

While performing above tasks, Cosimex works with clients in two different approaches:Representative Organization Approach and Importer & Distributor Approach. Whether acting as a Representative Organization or as a sole importing distributor, Cosimex considers the following tasks vital to build a productive long-term relationship with our respective principals:

· Execute an agreed marketing plan;
· Maintain sufficient in house sales staff for developing new business aggressively;
· Where necessary, identify and recommend the appointment of sole agents in the respective neighboring countries who will in turn act under Cosimex' overall sales coordination;
· Organize a central warehousing and logistical base in Hong Kong, given its free port status, excellent communications and superb support business series at international standards;
· Obtain market updates and related intelligence as needed;
· Provide regular reports on sales performance, inventory and budgeting;
· Attendance at trade shows and exhibitions as required, both in Hong Kong and China; and
· Upon request, arrange third-party facilities for handling bulk assembly and repackaging work in Hong Kong and China where we have established ties with related enterprises.

Representative Organization Approach

Cosimex offers a unique practical approach to product and marketing equipment on behalf of foreign manufacturing firms. It is unique because we intend to become an extension of their own marketing arm outside the respective home countries and relieve their burden of up keeping directly employed sales personnel to perform the same role. We call this the Representative Organization partnership whereby Cosimex will be responsible for staffing and establishing a Far East (including China, Taiwan, Japan, Korea and other Southeast Asian countries) distribution network by taking the incomparable advantages of the strategic location Hong Kong enjoys in the region.

If Cosimex is engaged as your Representative Organization, we will run the set-up by collecting commissions on sales only. However, depending on the level of market support prior to such appointment, a pre-determined monthly fee may be payable for recovering our direct expenses during the take-off period. Such expenses include:

· Warehousing and delivery.
· Office administration and other logistical support.
· Travel, communications, postage and entertainment.
· Advertising and promotion.
· Other out-of-pocket expenses.

The above non-commissionable charges shall be regarded as short-term as they will be subject to review within an agreed timeframe and eventually will be removed once sufficient income is generated by product sales alone.

Importer & Distributor Approach

Alternatively, depending on the commercial circumstances, we will be prepared to undertake a more traditional role by acting on a sole importer and distributor basis. In such case, Cosimex will import from principal and market exclusively in the agreed territory subject to review by both parties at intervals, and Cosimex will exercise full rights for determining the selling strategy and pricing levels.

Benefits to the Principal

By appointing Cosimex as an agent for domestic distribution in Asia, the benefits are substantial, and obvious:

· Lower direct overheads and better market entry position for your equipment and products due to our continuous, prudent efforts in representing complementary, non-conflicting quality brands so as to better reinforce the respective product lines;

· The best means of access to the China market;

· Central warehousing facilities in Hong Kong to receive consolidated shipments to reduce cost in freight charges;

· Similarly, the presence of a central distribution center close to other sales territories in the region can improve economy of product mix and stock management, and also eliminate excessive warehousing needs in scattered locations;

· Reduced production expenses made possible by low-cost assembly and re-packing in China.

Conclusion

Cosimex has offered its services to many renowned clients worldwide. We have help created many success stories together. We invite you to create your success story with Cosimex.
